De impeller is een belangrijk onderdeel van het koelsysteem van de motor. Deze dient elk jaar, of bij intensief gebruik elke 500 uur vervangen te worden. Ze zijn meestal gemaakt van neopreen rubber, voor goede mechanische eigenschappen (slijtvast). Dit betekent dat dit de beste keuze is voor een koelwaterpomp. Als de impeller wordt gebruikt in een bilgepomp, waarbij deze in aanraking kan komen met olie of brandstof is nitrile rubber een betere keuze. Deze zijn minder slijtvast, maar hebben een betere chemische bestendigheid, waardoor uitzetten van het rubber en daardoor blokkeren van de pomp voorkomen.
