

OCEANVOLT

VARIABLE PITCH SAILDRIVE

A variable pitch saildrive that adjusts the pitch of the propeller blades automatically so that the power generation and power output are optimal. The power generated can be used to power all the electronics on board without the need to have a separate generator. Suitable as a propulsion motor for monohulls between 36-50 ft & multihulls between 36-60 ft. It can also be used as a hydro generator in boats up to 100 ft.

- **300% - 400% more effective charging**
- **100% more effective reverse**
- **25% more power & range**
- **Full power over the entire speed range**
- **Low drag when sailing (as feathering propeller)**
- **Less vibration & noise**
